

Manual Virtual workstation (macOS - EN)

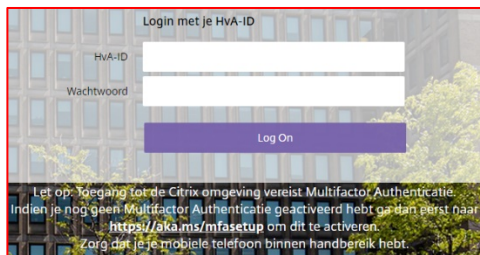

You can use apps.hva.nl to access your virtual workstation. Here, you can view the same files – those on your network drive, for instance – as you would be able to see when logged into an AUAS computer. The first time you open apps.hva.nl, you will need to install an app called Citrix Workspace on your computer. This manual will show you how to launch the virtual workstation on a private computer running macOS. In this manual we have used macOS 10.15 Catalina.

Two-step verification is used when logging in. You can read more about it [here](#) as an employee and [here](#) as a student.

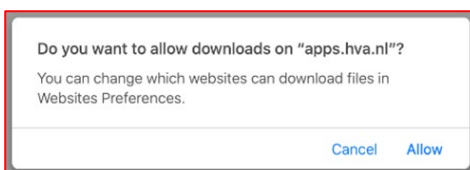

1. Open **Safari** and go to <https://www.citrix.com/receiver>. **Download** and **install** the Workspace app.

It is possible that you will be asked to add an account during the installation. Choose **No**.

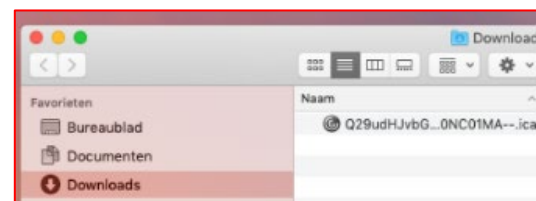

2. Go to <https://apps.hva.nl>. Log in using your **AUAS ID** and **password**.

3. Approve the login request on your mobile device. You have 10 seconds to perform this action.
4. After logging on, you will receive the following pop-up. Click **Allow**. An ICA-file will automatically be downloaded.

5. Go to the **downloads folder** in the Finder and **open** the ICA-file.

6. You are now logged in and ready to begin using the AUAS virtual work station.

Next time you want to open the virtual workstation, you can go to <https://apps.hva.nl> and click on **HvA Desktop**.

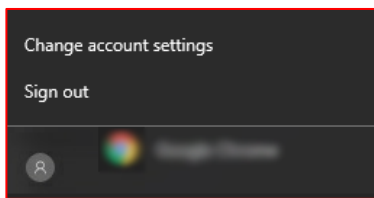

Log out

There are two ways to **log out**.

1. Open the **Start menu** and click **this button**.

2. Select **Sign out**.

1. Click **this button** on the taskbar.

2. You must confirm the choice before you will actually be logged out. Click **Yes**.
