

VPN installation guide for macOS

1. Introduction

Update your macOS to the most recent version so that the VPN software can be installed without any problems. To do this, check the version of the operating system by clicking on the Apple logo/menu in the top left and choosing About this Mac and check whether an update is available.

Is this instruction not entirely clear? Check out https://support.apple.com/en-us/HT201260 .

In the example below, the macOS version is Ventura 13.0.1.

At the end of the installation, the VPN software (Ivanti Secure Access) starts up and a confirmation of the successful installation is given. Then click *Close*.

After clicking Close, you will be asked whether the program may be removed. The installation file is no longer needed so can be moved to the trash.

5. Using Ivanti Secure Access

िक

The application has now been successfully installed, added to the taskbar and in the overview of the installed software under Applications/Apps. Start the program by clicking it in the taskbar or double-click on the program under all applications.

Image: Control of the second seco

After opening Ivanti Secure Access, a blank window appears. Press the + sign at the bottom left to add a new connection.

Connections				
	connections			

The following window appears.

Select the type Policy Secure (UAC) or Connect Secure (VPN) here, which is the default value, HvA VPN can be used as connection name and vpn.hva.nl must be chosen as Server URL

Type:	Policy Secure (UAC) or Connect
Name:	HvA VPN
Server URL:	vpn.hva.nl
	Connect Cancel Add

Then choose Connect, after which the connection is added, and a connection is immediately set up with the AUAS VPN environment. You will now be asked for login details of the AUAS ID, fill these in.

A connection is now being made to the AUAS network.

	User Name: HvA-	ID	
	Password:		
Save settir	ngs	Cancel	Connect

6. Log out of the VPN software or extend the connection

Image: Constraint of the second s

If the connection to the AUAS network needs to be terminated, click on the Ivanti Secure Access logo, select HvA VPN and select Disconnect. If the application reports that the VPN session is about to expire, you can choose to extend the session in the same window, or click on the Ivanti Secure Access logo, choose HvA VPN and choose Extend Session.
